

Gen AI Exchange Hackathon

Team Name : Team Pluton

Team Leader Name : Yash R. Rathod

Problem Statement : Create an AI-driven platform or tool that helps local artisans market their craft, tell their stories, and expand their reach to new digital audiences.

Problem Statement :

Create an AI-driven platform or tool that helps local artisans market their craft, tell their stories, and expand their reach to new digital audiences.

Local artisans often lack strong digital presence.

They struggle to tell the story behind their craft in engaging ways.

Marketing (social media, brand narrative, taglines) can be too time-consuming or requires skills they may not have.

Reaching a global audience is hard without multilingual tools or access to AI powered marketing help.

Brief about the Pluton AI :

Pluton AI is an AI-powered storytelling and marketing platform designed to empower artisans and small businesses. It helps them build a digital presence by automatically generating brand narratives, social media content, taglines, and marketing strategies.

How it's different: Unlike generic marketing tools, Pluton AI is tailored for artisans—integrating emotional storytelling, multilingual support, and curated AI outputs.

How it solves the problem: By reducing time and cost barriers for marketing, artisans can focus on their craft while AI handles branding and outreach.

USP: AI-driven brand storytelling + multilingual marketing content specifically designed for artisan and small business needs.

Key Features of Pluton AI :

- AI-generated brand narratives and social media stories
- Automatic tagline generation for businesses
- Multilingual support for broader reach
- Trend-aware advertisement helper and marketing strategies
- Dynamic storytelling to build emotional connections with customers
- Free-tier accessible using Gemini API

Use-case diagram :

Architecture diagram of the proposed solution :

Visual Working Representation of the proposed solution :

AI-Powered, Artist-Focused

Technologies to be used in the solution:

- Google Gemini API (Generative AI).
- Netlify (Serverless Functions and hosting).
- HTML/CSS/JavaScript (frontend).
- TailwindCSS CDN (formatting frontend).
- GitHub (Deployment Code Serve)

Estimated implementation cost :

Free Tier using Google Gemini API

(initially , Scales to Pay-as-you-go)

Approximate \$1 per 2000 customer/responses .

Extremely efficient due to only one call in the entire process

Hosting on Netlify (Free/Basic Plan)

On scaling : 20\$/month for pro plan (below enterprise)

Domain : 20\$ per month approx

Estimated Paid Plan (scaling): \$50-70/month depending on user volume

Impact Goals :

High Serving Capacity and Scaling opportunities in Future.

Arist's Engagement increase.

Growth in social media followers or sales for artisans.
